John,
I recommend just sending the EA Report. CAS

To: Sanchez, Carlos; Miller, Gary
Subject: RE: SUBMITTAL: San Jacinto Waste Pits Superfund Site - Field Activity Report - Task Order 0130-RSBD-06ZQ

Both are too much information for Senior Management. I am suggesting we condense and send a streamlined version.

John C Meyer

John,
The EA Report covers everything. I believe that for Senior Management, the EA Report would be better.
The PRP reports are close to the Situation Reports. We can send both (EA and PRP).

I don't think this is the report to send to Senior Management. I think we should send something similar to a Situation Report that removal uses. See below:

1/3/2016
R6 Mississippi Flooding Update #3

Current status:

9752367

R6 is receiving situational awareness through close coordination with RRT6 partners. R6 has activated GIS support for incident awareness and the development of potential flood impacts (ie. high risk facilities, drinking water intakes and Superfund sites). GIS contractors are providing support within the REOC. R6 has conducted an OSC availability assessment to ensure readiness to respond as needed. R6 is monitoring the flood projections and timetable for Mississippi River cresting. EPA R6 has received no NRC reports related to the Mississippi River flooding event.

MISSISSIPPI RIVER STAGE FORECASTS (in feet): January 3, 2016									
STATION	Flood Stage	Current Level	Change	01/4	01/5	01/6	Predicted Crest and Date		Flood Stage Expected Date

Arkansas

The NWS is reporting that the majority of rivers within the Arkansas Red River Basin have receded below flood levels. The Mississippi River is above flood stage at Osceola, AR; Tunica, MS; Arkansas City, AR; Greenville, MS and at the Red River Landing stations. Local media in Osceola, AR and Arkansas City, AR are reporting localized flooding. The state of Arkansas has not identified any immediate concerns or needs. Damage assessments will begin once flood waters recede. Only two minor oil incidents involving a small marina fuel storage tank and a pleasure craft have been reported. The ADEQ response team are at normal operational status. No EPA assistance has been requested.

Louisiana

LDEQ and LOSCO are not reporting any incidents related to the Mississippi River. They are monitoring situation through normal operations. No EPA assistance has been requested.

USCG

The USCG is focused on impacts of flooding on River transportation and search and rescue activities. They are reporting that based on current information they don't believe that the impacts of the flooding will be as severe as the 2011 flooding events.

FEMA

FEMA R6 is reporting normal operations. No FEMA assistance has been requested by Arkansas or Louisiana.

Beginning on Monday, January 4, a USACE LNO will be Mission Assigned to Region VI to support Mississippi River Crisis Action Planning. No EPA activations has been received.

EPA project impact:

Minden

Flooding has impacted the scheduled delivery of the Contained Burn Chamber (CBC). The CBC is on a barge at the Port of Catoosa on the Arkansas River. River traffic has been stopped due to the flood levels of the River. A delay of 20 days is possible before the locks can operate and allow the barge to continue. After the barge clears the Arkansas River, it will continue on the Mississippi and Red Rivers, another 2 of the 5 rivers at flood stage. While work continues at the Site, the delayed delivery will affect the project schedule. The Corp of Engineers has advised EPA that it will prioritize the movement of the barge transporting the CBC once the river conditions are safe to do so.

Anticipated future actions:

R6 will continue to monitor situation thru normal operations.

Based on RRT agency input, an incident-specific RRT Coordination Call has been postponed until situation warrants a call.

RRT6 is finalizing guidance on Flood Preparedness Recommend Best Practices.

R6 will be participating in a USACE stakeholder meeting on Tuesday, January 5, 2015.

John,

Sam was asking for a Report for the San Jacinto Site. Should we send this report to Sam, Carl, Pam , and David Gray? CAS

EA Engineering, Science, and Technology, Inc., PBC (EA) is providing one electronic (e-mail) copy of the Field Activity Report, which summarizes Field Oversight activities performed by the Potential Responsible Party's contractor conducted on 23 December and 28–31 December 2015 for the above-referenced Task Order. Please let me know if you have any questions regarding this deliverable.

Sincerely,

April
